

STATEMENT OF PURPOSE

I strongly believe that due to the technological advancement in every segment and industry, it is needed to have a strong network system that helps to get in touch with the world at just one click away. According to me, being a computer expert in future, I will be having ample of opportunities to lift my career to a great height. In the current world, it's almost impossible to imagine that someone can live without computers. They have become an electronic device of almost every day use for individuals of every age, and essential in almost all the business dealings that are made nowadays. I have completed my Higher secondary education in the Year 2018. So for further study I decided to pursue higher education abroad in the field of Computer Science from UK

The UK has a long history of welcoming international students. Undergraduate and postgraduate courses in the UK tend to be shorter than in other countries which can help to keep the cost of tuition fees and living expenses down. Studying in the UK will help student develop excellent language skills. British higher education and qualifications have an impressive international reputation, with students in the United Kingdom encouraged to develop their potential while enjoying a full social life. UK universities are inspected regularly to ensure that they uphold the high standards of teaching, learning and research set by the Government. The Quality Assurance Agency for Higher Education (QAA) is the key body charged with maintaining these standards. UK was also voted to be the 3rd for having best universities in the world. The prospect of getting to experience education system in such a country is very promising to me.

Studying this course I would update myself with the latest techniques and methods used in the current scenario in the market. The areas which I would explore Computer Architecture, Algorithm, Information System, Data Communications and many more. During my learning of this course I would develop the professional skills which would help me to fetch the higher designation post in the market. Moreover, The most important aspect of computer science is problem solving, an essential skill for life. Students study the design, development and analysis of software and hardware used to solve problems in a variety of business, scientific and social contexts. Because computers solve problems to serve people, there is a significant human side to computer science as well. I grew up having an ultimate goal to pursue a BSc in Computer Science, but all it took for this goal not being met was a mistake while submitting my country's required "choice of study" education system.

After comparing the course modules of different countries which could help me to paint my career bright, I made my mind to pursue my further studies from **United Kingdom**. But this was not the end. After finalizing the country I was stuck in a maze of different university and was in a search of the path to reach the correct university and comparing all the details such as teaching methods, area, fees, course curriculum and so on and finally decided to study in **University of West London**. The most important reason to study in UK is that it provides the academic experience that is hard to beat. The graduates from the UK are leaving their signature mark not only in UK but other countries too as the education is recognised all across the world and the knowledge provided to the academician is remarkable compare to other countries. The atmosphere is friendly and eases for any student to adjust and feel like their own home-town.

Thus, to wrap up my discussion I would like to conclude that studying in UK would give me a platform where I would be able to paint my dreams and touch the peak of success with minimum barriers.
