

STATEMENT OF PURPOSE

Well, to begin with I am **STUDENT'S NAME** who has completed Bachelor of Computer Application from Sardar Patel University in 2013 with first class. Since childhood I always dreamt of pursuing the higher education from international university but did not receive any chance to study and completed my masters from India only. Currently the scenario is such that the level of competition have touch the peak of mountains and in this competitive world I seemed to be a far away from the crowd, so to stand in the crowd giving the tough competition I decided to go for further studies. After surfing the different countries, I felt the UK a correct destination which would help me to develop my skills according to the current requirement of the employers.

The UK is substantially cheaper than other English-speaking study abroad destinations such as the US and Australia when it comes to paying for higher education. The UK is one of the most popular countries to travel to for the purpose of earning an education. Generations of international students have come to the UK for their education, which means that British universities have decades of experience in operational with international students. The UK is the home of English hence an ideal place to develop language skills and enhance employment prospects. It has a standing of adopting modern technology at a faster rate other than other countries in the world.

As I have researched a lot about Wolverhampton University, it has 2500 overseas students from 100 countries. The university has received silver rating in Teaching Excellence Framework in year 2017. Further the employment rate is 96% after graduation completion. This means after graduating the proportion of getting job is much higher as compared to any other university. Also the city of Wolverhampton is situated in at affordable distance from the university, like Birmingham 18 minutes; Manchester 70 minutes; London 98 minutes. Thus I can say that if someone is looking for multiculturalism and a dynamic urban environment without the London price-tag, then Wolverhampton may be right for you.

MSc Cyber Security with Professional Placement offers a unique opportunity for international me to gain relevant work experience within an external business or organisation, giving me a competitive edge in the job market. The programme comprises particular developments in security with a firm base in academic research and also offers the opportunity for me to study selected topics in advanced computer science. This programme meets a continued growing demand for specialists in this area by offering a way for individuals in current employment with relevant industry experience as well as recent graduates to study and enhance and develop their skills. MSc Cyber Security with Professional Placement programme will therefore draw graduates wishing to enhance their undergraduate studies in computing with advanced study of security to equip them for senior positions with responsibility for the IT technical and management based security of an organisation. In addition, the programme encourages those with relevant industry skills to specialise in cyber security or refine and develop their existing expertise.

Thus, to recapitulate, I would like to say that an opportunity provided to me to study in UK I would be able to build my own name in IT world which is one of the fastest growing industries all across the globe. With the help of international learning and experience I

would be able to place my unique identity amongst Indian market and reach the peak of success with minimum hurdles and maximum experience.
