

STATEMENT OF PURPOSE

Improve the lives of others by preventing and managing health problems. Make a real difference to people's health and help them to live longer, healthier and more fulfilling lives. I want to focus on areas that match my interests and skills. I have done graduation in Bachelors in Science in 2013 and then Diploma in Medical Laboratory Technology in 2015 from Sardar Patel University. MBA these days have become a degree which works as water, it will mix up and give the same effect whatever background you are coming from. It doesn't matter if you are from Bsc or maths or medical science, they just act as a carrier transitional tool for my career. Since early days I always wanted to pursue my higher studies in international university so having the opportunity to fulfil my dreams see my future secure and bright I have decided to complete my further studies from international university.

UK universities all offer programs that I can utilize when applying for jobs at home after my studies. In general will be American employers impressed with an applicant who has studied overseas, especially at a UK university. Not only is the academic standard at their partner universities valued and of high prestige, my experiences abroad will demonstrate that I am independent, open-minded, flexible and up for a challenge! Among the benefits of studying in UK is a wide choice in picking my field of study and institution. One can choose from 150,000 courses at universities and colleges across England, Northern Ireland, Scotland and Wales, and directly contact the institute to order prospectuses. The UK education system promotes close interaction between students and lecturers and provides the freedom to combine different subjects into a single course of study. Indian students who're worried about expensive tuition fee need not lose sleep either, for there are many scholarships that I can apply to, especially at postgraduate and research level, to support my study and cost of living costs. Indian students in the UK are eligible to receive free medical treatment by the National Health Service (NHS) if enrolled in a full-time course. My spouse/partner and/or dependent children will also be exempt from payment if they reside with me during the course of my study programme. My college or university may have a special health policy for students too. Studying in UK is an opportunity to experience a multicultural environment, meet new people and fellow international students from across the world and discover new places. I benefit by developing a range of skills that are necessary to be part of today's global workforce.

The university which would help me to provide detailed knowledge is Oxford Brookes University. The university is recognised for providing one to one attention to the students and developing their personality as per the current

scenario of the market. Moreover, they also boost their graduates to develop innovative ideas and with the help of lectures from the professionals help the academician to learn about the most-up-to-date methods to overcome the hurdles faced by the huge industries. I researched all the things from the website of the university as well as I have the brochure of the university, which I downloaded from university's website.

This highly successful and innovative MPH in Public Health welcomes UK, EU and international applicants from a wide range of professions. It focuses on the health of communities as a recognised concern to a wide group of professionals. In their course, I will discover how health is related to individual biology and genetics, as well as to behavioural, social and environmental factors. We show how good health can be a right, not a privilege. Gain an advanced education in public health that is fit for the 21st-century, reflecting the growing significance of non-communicable diseases in all world regions, alongside a traditional focus on communicable and infectious disease. Demonstrate and critically evaluate integrated knowledge, skills and values that will underpin action, reflection and evaluation of your public health practice.
